Executive Summary

The Housing and Economic Land Availability Assessment (HELAA) is a key component of the evidence base which informed the preparation for the Arun Local Plan (ALP) and keeping it up to date will inform future monitoring of land supply.

It forms a strategic assessment of land available for development, which is required by the National Planning Policy Framework 2018 (paragraph 67 and 73) with further guidance set out in the Planning Practice Guidance (PPG).

This version of the HELAA replaces one prepared by officers in December 2017.

The HELAA presents a strategic picture of the availability and suitability of land within the Arun Local Planning Authority Area (LPAA) for development. Further, it attempts to establish realistic assumptions about the number of homes and amount of economic development that this land could yield and the timeframe within which this might come forward.

This HELAA report follows the same published methodology set out in May 2016 which was prepared in accordance with the National Planning Policy Framework (NPPF 2018) and the Planning Practice Guidance (PPG) at that time. However, it is recognised that recent changes to national policy and further signalled changes following pending outputs from a technical consultation and subsequent amended guidance, means that the methodology will need to be updated in future years. These changes will also require significant investment in resources and stakeholder engagement in implementing these new requirements. Therefore, this HELAA adopts the existing methodology for the period 2017-2018 although the HELAA has been updated following a 'Call for Sites' exercise conducted in May 2018 and references in the HELAA to the NPPF 2018 have been updated to the revised NPPF 2018 requirements as appropriate.

The HELAA assessment is important evidence used to inform plan making but does not in itself determine whether a site should be allocated for housing development.

The HELAA is therefore, considered together with a wider evidence base for monitoring the adopted Arun Local Plan but cannot be construed as committing the Council to allocate any particular parcel of land for a particular use, nor approve any application for development.

The HELAA is divided up into three sections: Introduction, Methodology and Detailed Site Assessments. Site proforma are contained within the appendices to this report.

Introduction

The National Planning Policy Framework 2018 (NPPF 2018) supported by guidance in the Planning Practice Guidance (PPG) requires Local Authorities to maintain an adequate supply of housing sites in their area. As part of this process, Local Planning Authorities must consider where housing development would be best located and assess all potential opportunities for development locations.

The Housing and Economic Land Availability Assessment (HELAA), is a technical study that determines the suitability, availability and achievability of land for development. It is an important evidence source to inform plan-making, but does not, in itself, represent policy nor does it determine whether a site should be allocated for future development. Land allocations can only be made through the statutory Development Plan for Arun which includes the Adopted Local Plan 2018, Neighbourhood Plans and further plan making including a Non- Strategic Sites Development plan Document and Gypsy & Traveller Site Allocation Development Plan Documents.

This process was previously known as a Strategic Housing Land Availability Assessment (SHLAA), but has been renamed as the HELAA in order to reflect its ability to assess land for uses other than housing, such as employment. All sites that were considered as part of the previous SHLAA process were retained and carried forward into the HELAA to be considered in an up to date context.

This Housing and Economic Land Availability Assessment (HELAA) is the fourth housing land assessment document to be published. It is a rolling update to the initial SHLAA undertaken in 2009 and covers the areas of the district within the Local Planning Authority Area (LPAA).

This document provides a brief introduction to the HELAA and policy background, as well as the findings of this HELAA update itself. The original methodology can be viewed on the Council's website (www.arun.gov.uk).

The methodology for the assessment has been prepared in accordance with the latest planning practice guidance.

Whilst the HELAA is a key document, it is only one part of the extensive evidence base used to inform the preparation of the Local Plan. It is also important to understand that the HELAA:

- Does not allocate land for development and is not a statement of Council policy. It also does not outweigh or alter any existing policies or designations.
- Highlights the potential of land across the LPAA for development;
- Is not, and is not intended to be, a proxy for site allocations via the statutory 'Development Plan' for Arun; and
- The assessment uses an agreed, objective and consistent methodology which seeks to capture information on constraints as they exist at a particular point in time.

The HELAA can be viewed at the Council's Offices and on the Council's website. The online version takes advantage of interactive mapping to ensure that it is user friendly.

What is the HELAA?

An assessment of housing land availability is required by the revised National Planning Policy Framework (NPPF 2018) in order to "enable strategic policy making authorities to have a clear understanding of the land available in their area" (para 67, NPPF 2018).

As part of this, Local Planning Authorities must assess all potential opportunities for development locations to consider where residential development would be best located.

The aim of the HELAA is to assist the Council in the identification of suitable sites for development to enable it to maintain an adequate supply of land to meet the identified development needs (OAN).

Therefore, the purpose of a HELAA is to:

- Identify sites and broad locations with potential for development;

- Assess their development potential;
- Assess their suitability for development and the likelihood of development coming forward (the availability and achievability). (Paragraph: 001 Reference ID: 3-001-20140306, PPG).

This HELAA has a primary focus on housing potential, and consequently, economic sites have been considered where they have been submitted for housing development, included in the previous Employment and Economic Land Assessment, the previous SHLAA or, have been previously assessed for economic use. This HELAA does not assess all identified economic sites in the district. This may be addressed via other studies or changes to the future monitoring approach to land availability.

Sites assessed are identified as either:

- Deliverable (Suitable, Available and Achievable); or
- Developable (Suitable but either the availability is specified for a future date or is currently unknown, or the achievability of the site is unknown/marginal).
- Not developable – if a site is currently not considered suitable and/or it is not known when a site could be made available, it is neither suitable nor viable.

This HELAA report assesses development potential of those sites that have been submitted to the Council previously and through the 'Call for Sites' process. The report presents the following key outputs – with the exception of windfall which will be reported in the Authorities Monitoring Report using the intelligence gained from the HELAA:

- Details of all sites submitted as part of the HELAA process, including their locations on a map;
- An assessment of the suitability of each site for development;
- A notional development capacity that could be delivered on each site assessed to be suitable;
- information to assist the calculation of the potential windfall delivery of housing for the District (i.e. housing to be delivered within the Local Plan period on unidentified

sites or on sites that fall below the minimum threshold included in the HELAA) via the Authorities Monitoring Report; and

- An indicative trajectory of anticipated development and consideration of associated risks, also via the Authorities Monitoring Report.

The Assessment is updated on a regular basis in order to reflect any changes of circumstance with individual sites (e.g. previously identified constraints to the delivery of a site have been removed). The housing trajectory will also be updated to reflect any such changes. Updates to the assessment will:-

- Survey new and amended sites
- Re-assess the deliverability and developability of sites (this may mean that the status of a site may change as part of a review).

Background Information

The following section outlines the recent changes in the planning system and summarises the key pieces of local evidence that have informed the HELAA site appraisals in this update. The latter half of this section provides the Council's latest identified housing need.

Policy Context

National Planning Policy

The National Planning Policy Framework (as revised and published in July 2018 (NPPF 2018) sets out the Government's planning policy framework for England and how these policies should be applied. The NPPF 2018 states that the purpose of the planning system is to contribute towards the achievement of sustainable development.

The NPPF 2018 outlines how sustainable development is achieved through three overarching and interdependent objectives: an economic objective, a social objective and an environmental objective. To ensure sustainable development is pursued in a positive

way, a presumption in favour of sustainable development sits at the heart of the framework. Local Plans should “positively seek opportunities to meet the local development needs of their area and be sufficiently flexible to adapt to rapid change”. For decision-taking local planning authorities should approve development proposals that accord with an up-to-date development plan without delay and grant planning permission where the development plan is absent or out-of-date unless this would adversely impact on policies within the NPPF 2018 which protect areas and designated assets of particular importance or where adverse impacts significantly and demonstrably outweigh the benefits when assessed against the NPPF 2018 as a whole.

The updated NPPF July 2018 introduces a more detailed requirement to test the status of sites (i.e. the definition of ‘deliverable sites’ in Annex 2 to the NPPF 2018) through land availability studies such as the HELAA. However, the NPPF 2018 was only published in late July and there was also a recent Government technical consultation (‘Technical consultation on updates to national planning policy and guidance’ October 2018) on how the definition of ‘deliverable sites’ will be applied because of a need for further clarity on the interpretation of paragraph 73 of the NPPF 2018. The outcome of this technical consultation (26th October – 7th December) has yet to be published in revisions to the PPG. It is not therefore, possible, reasonable or appropriate to accommodate these changes in the HELAA 2018. Furthermore, any revised HELAA methodology to accommodate such changes will necessitate the allocation of new resources and new monitoring procedures with all developers and landowners and can only therefore, be a feasible introduction for the next HELAA update in 2019/20. The HELAA 2018 is consistent with current practice in support of the adopted Arun Local Plan July 2018 (for which the Independent Inspector’s report concluded that Arun has a 5.3 year housing supply). NPPF 2018 paragraph 74 clearly states that an authority with a recently adopted Local Plan can defend its 5 year housing land supply with an appropriate buffer, for a year – i.e. in Arun’s case - up until October 2019.

Paragraph 67 of NPPF 2018 requires that once a Local Planning Authority has a full understanding of housing needs in their area they should prepare a Strategic Housing Land Availability Assessment (SHLAA) to establish realistic assumptions about the suitability, availability and achievability (the likely economic viability) of land to meet the identified need for housing.

Paragraph 73 of the NPPF 2018 sets out a requirement to ensure that local authorities set out a housing trajectory on the rate of delivery for the plan period and annually update a supply of 'specific deliverable' sites (with an appropriate buffer) sufficient to secure a 5 year housing land supply, and also identify 'specific developable' sites (The 'Technical consultation on updates to national planning policy and guidance' (October 2018)).

In March 2014 the Government published the Planning Practice Guidance (PPG). This document replaced a number of Circulars and Planning Practice Guidance, including the 2007 Strategic Housing Land Availability Assessment Practice Guidance. The Housing and Economic Land Availability Assessment¹ section of the PPG provides guidance on undertaking land assessments.

The PPG recommends that housing and economic evidence should be undertaken as part of the same exercise. Therefore, in 2014 ADC officers merged the database of sites from the SHLAA (updated in 2012) and the Employment and Economic Land Assessment (2010) to create the Arun Housing and Employment Land Availability Assessment (HELAA).

The most up to date guidance on the preparation of a HELAA is contained within the PPG which suggests a site size of 5 or more units. To date, the Council's SHLAAs have applied a threshold of 6 or more units. This update however, uses the threshold of 5 or more units.

In line with the PPG, this update incorporates an increased emphasis on economic land by drawing out, from the assessment of suitability of sites for housing, whether mixed use opportunities might exist.

Local Planning Policy

Arun District Council's local planning policies currently consist of the adopted Arun Local Plan 2018 (ALP 2018) which covers the 20 year period 2011-2031. The ALP 2018 was adopted by Full Council in July 2018. This plan replaces the Arun Local Plan 2003 and any

¹ <http://planningguidance.communities.gov.uk/blog/guidance/housing-and-economic-land-availability-assessment/what-is-the-purpose-of-the-assessment-of-land-availability/>

saved polices for the Arun local planning authority area (i.e. that part of Arun District which falls outside the South Downs National Park). The ALP 2018 sets out a strategy for meeting its housing and employment needs as well as some unmet needs from neighbouring authorities, over the twenty year period providing a framework for growth and regeneration.

Evidence Base

The HELAA is used as part of the evidence base for planning policy documents and policy formulation, including the ALP 2018. There are a number of evidence base documents that also help to inform policy formulation, particularly those that consider strategies for the planning of new housing. Such documents include a Transport Study, Landscape Study, Sustainability Appraisal and an Infrastructure Delivery Plan. As a consequence, the findings of the HELAA need to be tempered against the findings of other evidence base documents when considering future housing potential. For example, the HELAA only assesses individual sites, whereas transport and infrastructure studies may consider the cumulative impact of potential developments. Therefore, whilst one particular settlement may seem to have significant potential for housing growth, based solely on HELAA findings, other evidence may paint a different picture of how much of that potential is suitable and deliverable.

In addition, it should be noted that evidence based documents prepared and held by the Council have been utilised in helping come to conclusions on the status of HELAA sites.

HELAA Update

The HELAA should be reviewed and updated on an annual basis in order to ensure that the information contained within it is as accurate as it can be. As a consequence, the Council has undertaken a review of the HELAA in 2018.

The update to the existing HELAA has enabled the Council to identify and assess new sites and broad locations (as well as review/update data regarding existing HELAA sites) to identify which are 'deliverable', 'developable' or 'not currently developable' for housing and employment development. Please also refer to the above Policy Context section on

the changes recently introduced by the NPPF 2018 in relation to the definition of 'Deliverable' and further recent technical consultation which will be followed by further national policy guidance in due course, on applying the definition - which will therefore, be addressed in future HELAA studies.

The HELAA 2018 is consistent with current practice in support of the adopted Arun Local Plan July 2018 (for which the Independent Inspector's report concluded that Arun has a 5.3 year housing supply) which was prepared under the previous version of the NPPF (2012). The NPPF 2018 paragraph 74 clearly states that an authority with a recently adopted Local Plan can defend its 5 year housing land supply with an appropriate buffer, for a year – i.e. in Arun's case - up until October 2019.

The preparation of an updated trajectory for the delivery of sites is also crucial to ensure that the Council can test the delivery of a five-year supply of deliverable sites against the Council's housing targets.

The 2018 HELAA, therefore, replaces all previously published land availability assessments.

Consultation and Call for Sites Exercise

As part of the update to the HELAA, the Council undertook a general 'call for sites' in June, in which landowners and developers were able to promote any new sites within the District that can accommodate 5 or more additional dwellings for inclusion within the HELAA.

The Council also asked all those who have previously had some involvement with land within the existing HELAA, be that landowner, site promoter, a previous application or agent, to review their site information and provide the Council with an update of any relevant information. This would update the Council's records and help the Council assess whether a site could be considered to be achievable and available.

The exercise included a form which was provided in both paper and electronic format. In an attempt to contact all of the landowners in the HELAA, letters were sent out requesting that the existing information held about the sites should be reviewed.

The intention for carrying out such a consultation was to ensure that the HELAA baseline is accurate and as up to date as possible.

The level of information made publically available was extensive, and displayed in full. This was provided by way of an interactive map and a complete version of the 2017 HELAA appraisal.

A good level of responses was received as a result of the call for sites exercise. The results have been useful and fed into the final version of this report. Responses were received from a variety of sources including Town and Parish Councils, key stakeholders, local groups and residents, along with landowners, agents and developers. As a result of the exercise, an additional 29 sites were added to the HELAA appraisal.

Identified Housing Need for Arun District

The Adopted ALP 2018 contains an OAN of 919 dwellings per annum (based on the Updated Housing Needs Evidence GL Hearn 2016).

The Local Plan makes appropriate provision for that figure, however, the final adopted policy target is 20,000 dwellings (1,000 dwellings per annum) over 20 years which takes account of the OAN and also some unmet housing need arising from neighbouring authorities (i.e. Worthing, Chichester and South Downs National Park authorities) to meet the Duty to Cooperate. The housing supply is stepped across the plan period to match the planned delivery of sites, with targets for each five year period, totalling the delivery of the whole plan target of at least 20,000 homes by 2031.

For the purposes of calculating the Districts five year housing land supply, a 20% buffer has been applied to reflect persistent under delivery. A housing shortfall of 306 dwellings has also been included within the five year period 2017-2022 in line with the PPG. The ALP 2018 sets out a target allocation of 1,250 dwellings for delivery via either a Non-strategic Sites Development Plan Document or Neighbourhood Plans or both. The HELAA

will provide an important source of evidence on potential land supply information to aid such plan preparation.

Important information and Caveats related to the HELAA

The HELAA is an important evidence source to inform Plan making, but does not in itself determine whether a site should be allocated for housing or economic development or whether planning permission should be granted. The allocation of a site for development can only be made through the Development Plan Document (DPD) process and via Neighbourhood Plans (NP). The Plan making process (including Sustainability Appraisal) will determine which suitable sites should come forward for development and for what level of development.

Although sites can only be allocated through the DPD and NP process, planning applications on such allocations must still be determined via the Development Management process and satisfy planning requirements or otherwise be refused.

The inclusion of a site within the HELAA does not preclude it being developed for other uses.

The HELAA is not the Council's last word in respect of site analysis for Development Management or site allocation purposes. Due to the scope of the HELAA, the Council has not assessed every site to the extent that would be required to support a planning application or make an allocation. The resource implications are too great. It can provide a view on suitability and capacity based the strategic level of analysis undertaken, which is proportional to the primary task of the HELAA, which is to assist in local plan-making and to evidence, broadly speaking, what the district might be able to achieve in respect of growth and the options for where growth can go.

The assessment and conclusions of sites may be subject to change over time, for example site boundaries may change, constraints may be overcome / mitigated or additional constraints identified, likely timescales may change, along with site capacities.

Monitoring and Updating the HELAA

The HELAA is a live document and it is important that it is monitored and kept up to date so that it is a useful resource for the Council. As a result, it has been incorporated into the ALP 2018 monitoring framework and will be monitored annually in accordance with the PPG.

The main information that shall be monitored is as follows:

- Progress with delivery of development on allocated sites and sites with planning permission;
- Planning applications that have been submitted or approved on sites and broad locations identified by the assessment;
- Progress that has been made in removing constraints on development;
- Unforeseen constraints that have emerged which means a site is no longer deliverable or developable, and how these can be addressed;
- Evidence to support the assessment set out in the Authorities Monitoring Report whether the windfall allowance is coming forward as expected, or may need to be adjusted.

Sites submitted to the Council following the cut-off date for this assessment, will be considered as part of the next review.

If any member of the public, developer, landowner/agent or Parish Council or other organisation has any further information they would like to submit in relation to a site already within the assessment (including factual errors), this material should be passed to the Council via the update form which can be found on the website (<http://www.arun.gov.uk/helaa>).

Information related to potential new sites for inclusion in the HELAA, should be sent to the Planning Policy and Conservation Team, via the 'Call for Sites' form on the Council's website. These sites will be considered as part of the next review.

Following the publication of this report, the next review of the HELAA is scheduled for publication in autumn 2019. The cut-off date for the submission of new site information will be made available on the Council's website.

Structure

Due to the nature of the topic covered, the HELAA is divided up into a number of sections/parts:

Part one: Introduction.

Part two: Methodology – this identifies the methodology prepared in the topic paper dated May 2016. See sections on Policy Context and HELAA Update for information on recent changes to national policy and technical consultation on the definition of ‘Deliverable’ sites and how this will be accommodated in future HELAA studies following further anticipated guidance.

Part three: Site assessment information (this will also assist the Authorities Monitoring Report in calculating windfall performance and housing delivery trajectories).

Appendices: Detailed site assessments – this part contains information related to each of the sites assessed. The site assessments are reported by their status: deliverable, developable and not developable.

The report presents the following key outputs:

- Details of all sites submitted as part of the HELAA process, including their locations on maps;
- An assessment of the suitability of each site for development; and
- A notional development capacity (informed by the Arun Local Plan Viability Study 2016) that could be delivered on each site assessed to be suitable.

Methodology

Establishing a Methodology

The HELAA methodology was established in 2016 and has been used for the HELAA 2018.

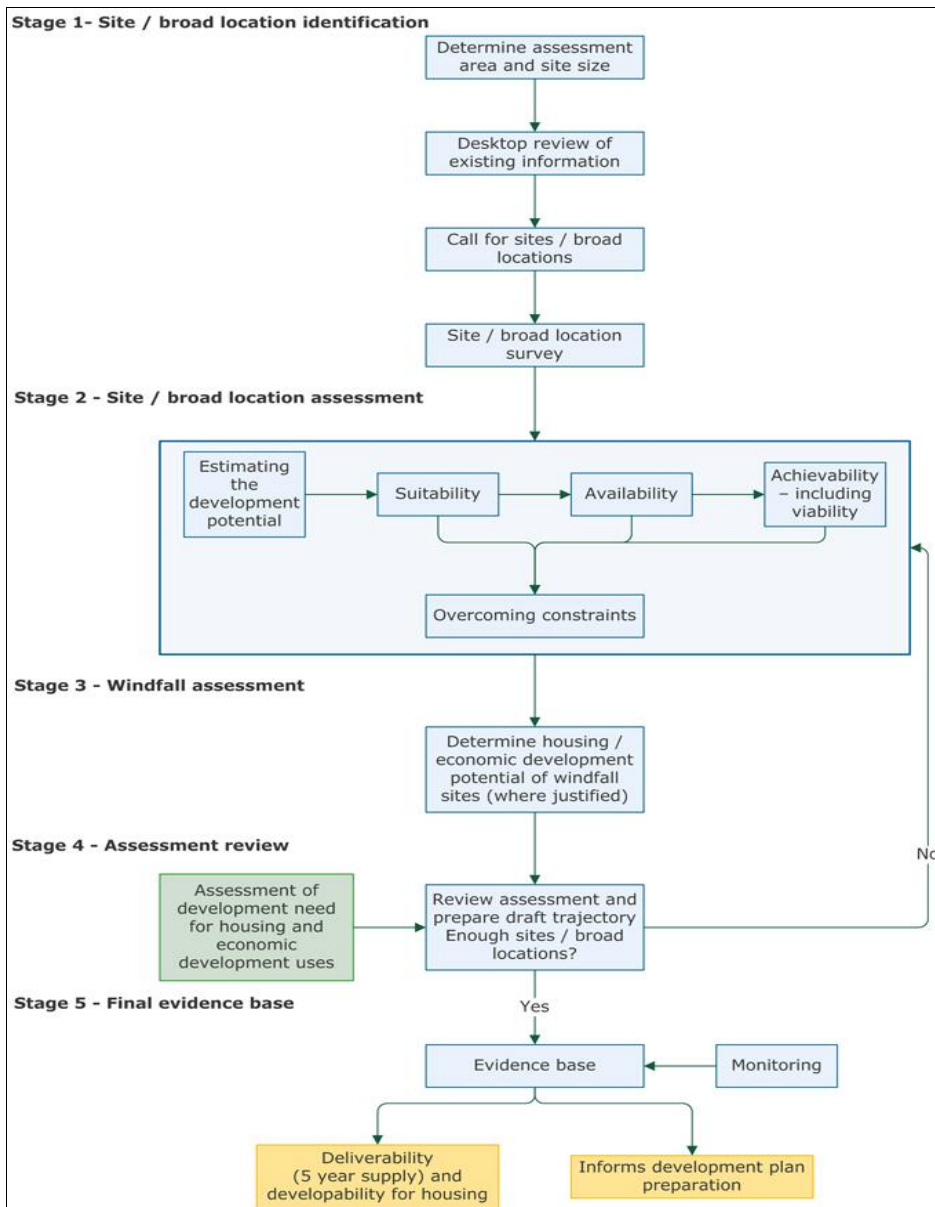

The Process

The adopted methodology sets out a 5 stage approach, based on the approach identified in the PPG 2014, for undertaking the HELAA. It is recognised that the NPPF 2018 will introduce new requirements (see National Policy Context sections below) for future HELAA studies and the PPG is likely to be updated in the near future. Therefore, the existing agreed HELAA methodology is adopted by the HELAA 2018 which broadly is consistent with the NPPF 2018 but does not yet fully address some of the new requirements of the revised definition of 'specific deliverable sites' pending the outcome of the Government's technical consultation on its application and promised revisions to the relevant PPG 2014 guidance. The agreed methodology is therefore as set out below:

1. Site identification;
2. Site assessment;
3. Windfall assessment;
4. Assessment review; and
5. Final evidence base.

The above approach has been followed and the various stages have been addressed in the subsequent sections of this report. See sections on Policy Context and HELAA Update for information on recent changes to national policy and technical consultation on the definition of 'Deliverable' sites and how this will be accommodated in future HELAA studies following further anticipated guidance.

The entire process is summarised in the flow chart on the following page.

Source: PPG

The following paragraphs provide a summary description of the methodology stages outlined above, followed in preparing the HELAA 2018 update. The complete methodology can be found on the Council's website (www.arun.gov.uk/helaa).

Stage 1: Identification of sites and broad locations

Geographical Scope

The HELAA has been undertaken at a district level. The assessment area will cover that of Arun District Council Local Planning Authority Area, which does not include that area of Arun District which falls within the South Downs National Park.

Site Size/Threshold

The PPG states that all sites capable of delivering five or more dwellings should be considered as part of the assessment, but that plan makers may wish to consider alternative site size thresholds.

Any site considered to have an estimated yield falling below the threshold of 5 dwellings and 0.25ha (or 500m² of floor space) for economic development, has been excluded from the assessment.

Timescales

The HELAA is based on the period covered by the adopted ALP 2018 which runs from 2011 to 2031. Therefore the HELAA will include sites that have planning permission and are being constructed but still have phases for construction planned over the next few years. The HELAA will also include sites which may not be suitable, available or achievable at this time, but may be developable towards the end of the plan period. This will be reflected in the yield section of the HELAA.

Land designations

Within the Arun LPA area there are some clear intrinsic designations where development (housing or employment) would be unsuitable, so these areas have been excluded from the assessment.

Sites falling within or covered by the following nature conservation designations have been excluded from the HELAA:

- Special Protection Areas (SPA)
- Special Areas of Conservation (SAC)
- Ramsar sites
- Sites of Special Scientific Interest (SSSI)
- Regionally important geological and geomorphological sites

Other designations

Other important designations for consideration within the HELAA are:

- Flood zone 3b
- Open space
- Ancient woodland
- Sites of Nature Conservation Interest (SNCI),
- Nature reserves,
- Historic parks and gardens, Scheduled Ancient Monuments (SAMs)
- Local Green Space

Although development in these locations is not preferable, it may, in some instances be possible to appropriately mitigate adverse impacts through development design.

Identifying New Sites and Broad Locations

A general call for sites, running from 22nd May to 30th June 2018 was held in order to ask consultees to provide updates on each of the sites and to identify whether there are any sites which should be added to the HELAA. The call for sites was advertised on the Council's website as well as a public press notice.

In addition to the HELAA call for sites exercise, the Council also undertook an exercise to identify new sites through a desktop review of data covering the Local Planning Authority area. Data sources for such desk top reviews may include the following:

- 'Made' Neighbourhood Development Plans
- Planning application records including unimplemented, withdrawn and refused
- National register of public sector land
- Empty property register
- English House Condition Survey
- Valuation Office database
- National Land Use Database
- OS maps and Aerial photography
- Business enquiries for land, active engagement with sector.
- Active engagement with local landowners

Neighbourhood Development Plans

There are currently fifteen 'made' Neighbourhood Development Plans across the district. Each housing allocation within the plans has been included in the most up to date version of the HELAA. Ford Neighbourhood Plan has recently passed referendum and is due to be 'made' following consideration at Full Council on the 9th of January.

When a site has been allocated in a NP, there is a strong level of certainty that the site will be delivered.

As part of the desktop exercise, sites which were considered as part of the Neighbourhood Development Plan processes but rejected at Examination stage, or even prior to that stage, will be included in the HELAA and reassessed.

Greenfield/Previously Developed Land

The identification of sites for inclusion within the HELAA will include both greenfield and brownfield land which could be improved or intensified. Where a site has particular

development constraints, these will be clearly documented together with a description of how this could be overcome, if appropriate.

Whilst policies within the ALP 2018 seek to make optimal use of land within the built up area boundaries of existing settlements, it is not possible to accommodate all future development within these boundaries. There will be greenfield sites which lie on the urban fringe of the main towns and villages which will need to be considered for future planning purposes. In these cases, consideration will be given in particular to landscape, biodiversity enhancement, woodland management, recreation provision, and flooding and access routes.

Employment Land

With regards to employment land, an important data source to be used to check/update the baseline data, and to add new employment sites is the Commercial and Industrial Land Assessment (CILLA) data provided by WSCC on an annual basis. The CILLA provides data on all employment sites of 50sqm+ which are committed, available or in course of erection². The Authority Monitoring Report also includes data on the available commercial sites available and completed.

Additional Data

Since April 2015, the Council has collected data on care homes under use class C2 which will provide useful data to input into the HELAA as part of the identification of committed/deliverable sites.

Submitted Sites

Submitted sites include those submitted to the Council by an external body such as a landowner, agent or Town/Parish Council. Information was collected via a Call for Sites form, available to download from the Council's website.

² The data provided for the CILA includes sites .50sqm floor area of new or change of use to any of the following: A1, A2, B1, B2, B8, D2, C1 hotel if more than 25 rooms.

Table 1 summarises the type of information collected for each site.

Table 1: Information to be collected and stored for each site.	
Site Characteristics	Site Size
	Site Boundaries and location
	Current land use(s)
	Surrounding land use(s)
	Character of surrounding area (i.e. rural, urban etc)
Constraints and ways to alleviate them	Physical constraints, e.g. access, contamination, topography, flood risk, natural features of significance.
	Environmental constraints
	Planning Policy Constraints, e.g. designations, landscape issues
	Infrastructure constraints, e.g. impact on highways, access to the site, proximity to public transport
Development Progress	Ground works complete/ homes started / site built out
	Total number of units proposed/permitted
	Units built
Suitability and Deliverability	Assessment of whether the site is suitable for housing, including where applicable as part of a mixed use development. An assessment of and land preparation costs An assessment of viability and deliverability A summary of land ownership/ control of site
	Likely timescale for commencement of development Identification of barriers to development and how they can be overcome

Broad locations

Broad locations are wider areas, identified to have characteristics for accommodating housing developments, but where not all potential sites may have been identified.

The advantage of identifying broad locations is that it gives communities an idea of where future development may be directed and it will provide developers with a greater degree of certainty about where development may be encouraged. It is a proactive approach to planning, which reflects positive choices about the direction of future housing developments, rather than a reactive approach to development opportunities as they arise. Examples of broad locations include those:

- **Within or adjoining settlements** – for example, areas where housing developments are, or could be, encouraged and small extensions to settlements; and
- **Outside settlements** – for example, major urban extensions, growth points, growth areas, new free-standing settlements.

Stage 2: Site/Broad Location Assessment

Calculating Development Potential

The housing potential of a site refers to the net number of dwellings that the site can be assumed to accommodate through its development or conversion of existing buildings.

The HELAA had taken a relatively simplistic approach to modelling³, based on an assumption of 30 units per hectare (ha). In reality the density will vary relative to the size of the site and the amount of open space. Therefore, rather than simply apply the 30units/ha used in the HELAA the following densities have been used (based on the advice contained within the Arun Viability Study, 2016).

³ As set out in paragraph 8.2 of the Housing and Economic Land Availability Assessment (HELAA) Draft Mid Examination Topic Paper and HELAA Update Methodology May 2016

Residential Development Densities Units/ net ha	
Smaller villages and other locations	30
Modern Estate Housing	32
Main Settlements and large villages	35
PDL in urban area	45
Urban Flats	75

Source: Local Plan Viability Assessment Update, HDH (July 2016)

In addition, the following net developable areas have been identified, which have influenced the final suggested yield of each site. With this in mind the following assumptions have now been used in the modelling:

Residential Net Developable Areas	
up to 0.4ha	100%
0.4 – 2ha	80%
2 – 5ha	70%
5ha+	60%

Build Out Rates

The HELAA has taken a pragmatic approach and made an assumption on build out rates largely dependent on the amount of dwellings that the development of a site could yield. The assumption used is for 50 dwellings a year (on average) associated with an independent means of access to the site. It is recognised that in the first year that completions are expected, the build out rate may be slower as development may have only occurred for part of the year.

This approach has been taken to ensure that a consistent approach is followed for all sites.

It should be noted that the Assessment does not pre-empt or prejudice any planning decision made in the future on any particular site and the assumptions made on densities or indicative yields should not be taken outside of the context of the HELAA.

Factors to be considered when assessing whether sites or broad locations are likely to be developed

As set out above, paragraph 73 of the NPPF 2018 requires Local Authorities to ‘identity and update annually a supply of specific ‘deliverable’ sites sufficient to provide a minimum of five years’ worth of housing against their housing requirement.’....and also ‘a supply of specific ‘developable’ sites or broad locations for growth...’ for housing over the longer term (Para 67, NPPF 2018).

Annex 2: Glossary, of the NPPF 2018 provides the following definitions for deliverable and developable sites:

Deliverable: To be considered deliverable, sites for housing should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that housing will be delivered on the site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years.

Developable – To be considered developable, sites should be in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed at the point envisaged.

Not currently developable - If it is unknown when a site could be developed, then it will be regarded as ‘not currently developable’, this could be, for example, because of severe

constraints to development and not knowing when or if, they might be overcome.

The assessment criteria for determining whether a site is considered suitable, available or achievable is summarised below.

Assessing Suitability

The assessment of suitability will be guided by the ALP 2018 policies, 'made' Neighbourhood Plan policies and national policy. Market and industry requirements in the housing market or functional economic market area have also been considered.

The full suitability assessment assesses sites against the following criteria:

- Physical limitations or problems such as access, infrastructure, ground conditions, flood risk, hazardous risks, pollution, contamination
- Potential impacts including effect upon landscapes, nature and heritage conservation
- Appropriateness and likely market attractiveness for the type of development proposed (market appraisal)
- Contribution to regeneration priority areas (addressing emerging policy requirements)
- Environmental/amenity impacts

Sites in existing development plans or with planning permission will be considered suitable for development. However, these sites will be checked to identify whether circumstances have changed which would alter their suitability.

Assessing Availability

The Guidance considers a site to be 'available' for development when, on the best information available, there is confidence that there are no legal or ownership problems, such as multiple ownerships, ransom strips, tenancies, or operational requirements of landowners. Generally this means that the landowner has expressed an intention to

develop, or that it is in the control of a developer who has expressed an intention to develop.

The conclusions about site availability were informed by an assessment of the information provided during the Call for Sites process and/or engagement with the landowners.

A secondary issue to consider when assessing availability was the timescales required to overcome any identified constraints. In the majority of cases, sites included in the first five years are those with full planning permission or allocated and with a firm commitment by the developer to bring the site forward for development. If a constraint to development exists but it is felt that this constraint could be overcome in the longer term, then the site is classified as 'available' but deliverable in the longer term 6-10 or 11+ years, depending on the nature or complexity of the constraints on the site.

The availability of the majority of sites was established by contacting the developers / land owners and checking relevant planning history to help clarify the legal status. Where problems have been identified, an assessment was made as to how those problems could be realistically overcome. This was based upon details provided from the land owner(s), the expert judgement of Planning Officers on the basis of local knowledge and information collected during site visits. In addition, if the background to a site shows a history of unimplemented permissions, then this has been taken into consideration when assessing deliverability.

Assessing Achievability for Housing

The assessment of whether a site is achievable or not is based on a judgement about the economic viability of the site, coupled with the ability of a developer to complete the scheme within a given time period. The assessment of a site's *achievability* takes into account the following factors:

- **Market Factors** such as:
 - Effect adjacent land uses may have on site
 - The attractiveness of the locality
 - Potential marketability of the site

- **Cost Factors** including:
 - Site preparation costs and/or exception costs
 - Affordable housing provision
 - Highways improvement works
 - Access issues and impact on Strategic Road Network
 - Third party land requirements
 - Availability and capacity of local utilities/ connection costs
- **Delivery Factors** including
 - An assessment of projected build out rates
 - Single or multiple developers
 - Size and capacity of the developer
 - Is third party land required?

For a site to be considered achievable, and therefore deliverable, there should be a 'reasonable' prospect that housing will be delivered on the site at a given point in time. In essence this is a judgement about the economic viability of the site and the ability of the developer to complete and sell housing over a certain period. If there is clear evidence that sites with planning permission will not be implemented before the permission expires, they should not be identified as achievable or deliverable.

As part of the Local Plan process, the Council commissioned an Affordable Housing and Viability Assessment which includes, in its brief, a viability appraisal to assess a sample of HELAA sites to establish site typologies in order to consider whether they would be economically viable when assessed against a range of development cost assumptions. These site viability typologies have been applied in assessing existing sites as well as those new sites added to the HELAA database and used to inform the final assessment of each site.

Each site in the HELAA has been assessed against the criteria above to determine whether it is suitable, available and/or achievable. The information is then used to determine whether the site should be classified as 'Deliverable', 'Developable' or 'Not Currently Developable' for housing development.

Overcoming Constraints

The PPG states that where constraints have been identified through the suitability, availability and achievability assessment, the consideration should be given to what action would be needed to remove them.

Where there are constraints on a site, the site/broad location assessment will consider whether there is a need for new infrastructure and environmental improvement or interventions to address the issue of multiple landowners.

Determining a development Trajectory

Once the initial stages of the assessment had been undertaken and an assessment of deliverability and developability made, the housing potential of all sites will be used to produce an indicative housing trajectory, setting out how much housing could potentially be provided in the District and at what point in the future it is likely to be delivered. This will be set out within the Authority Monitoring Report which will also consider the Districts performance on housing delivery against the Housing Delivery Test (HDT) introduced by the NPPF 2018. At the time of preparing this report the Standard Housing Methodology for Arun which may form part of the HDT (together with the ALP 2018 stepped housing trajectory) – has not been, classified published or confirmed - although it is anticipated the HDT of each local authority in England will be published in November 2018.

The 5 year land requirement has already been established in the recently adopted ALP 2018 at 5.3 years and is defensible until October 2019. The HELAA 2018 covers the monitoring period 2017-18 in support of the ALP 2018 which was prepared under the NPPF 2012. The revised definition of 'Deliverable sites' set out in the NPPF 2018 and recently consulted upon but not yet set out in updated PPG (as described National Policy Context above) will therefore, be a matter for future HELAA preparation.

As has already been stated, it is emphasised that the inclusion of a site within the assessment does not imply that that site will definitely be granted planning permission. The HELAA is a technical document used to identify a portfolio of housing sites which may

be picked for future planning purposes. However the final decision as to whether a site should be granted permission would be decided through the planning application process.

Stage 3: Windfall Assessment

The guidance identifies that a windfall allowance (Sites not specifically identified in the development plan) may be justified in the 5 year supply if a Local Planning Authority has compelling evidence as set out in paragraph 70 of the NPPF 2018.

A windfall allowance will therefore continue to be included within future Housing Land Supply (HLS) trajectories but this will now be reported within the Authorities Monitoring Report (AMR) rather than in the HELAA itself. It should be noted that Arun District together with other Districts within West Sussex together with the County Council, apply a windfall definition with a size threshold of 6 or fewer dwelling units for monitoring purposes. Some allowances will need to be made in the monitoring framework for delivery of some sites which fall within the windfall size threshold via the Non-Strategic Sites Development Plan Document and Neighbourhood Plans being prepared because such sites may be more sustainable and appropriate as deliverable allocations in Parish communities (the NPPF 2018 also emphasises the need to deliver smaller sites as a proportion of housing needs i.e. at least 10%).

Stage 4: Assessment Review

Following the full site assessment, the development potential of all sites will be collated to produce an updated indicative housing trajectory to accompany the Authorities Monitoring Report. This will set out how much housing and the amount of economic development that can be provided, and at what point in the future.

A risk assessment will be included which sets out whether sites will come forward as anticipated. If it is identified that there are not sufficient sites to meet the adopted housing target and stepped trajectory or HDT Standard Methodology projections (whichever are the lower) the HELAA assessments will need to be reviewed again to identify whether there are any development potential assumptions that can be amended. Contingency

arrangements will need to be identified where it is not possible to identify sufficient suitable, achievable and available sites to meet the above housing requirement. The HELAA will in any case, also need to be revised in future years to address the NPPF 2018 changes in the light of further awaited PPG guidance.

Stage 5: Final Assessment

The core outputs from the HELAA shall be:

- List of all sites or broad locations considered, cross-referenced with a National Land and Property Gazetteer number to locations on maps;
- An assessment of each site or broad location, in terms of its suitability for development, availability and achievability (including whether the site/broad location is viable) to determine whether a site is realistically expected to be developed and when;
- Contain more detail for sites which are considered to be realistic candidates for development, where others have been discounted for clearly evidenced and justified reasons; the potential type and quantity of development that could be delivered on each site/broad location, including a reasonable estimate of build out rates, setting out how any barriers to delivery could be overcome and when; and
- provision of an evidence base for calculating an indicative trajectory of anticipated development over the ALP 2018 plan period to 2031 and consideration of associated risks to be set out in a subsequent Authorities Monitoring Report.

Site Assessment

This chapter sets out the results of the HELAA in summary format. Detailed site assessments are contained within individual pro-forma contained within the appendices to this report, or via the interactive map found on the Arun District Council website (www.arun.gov.uk).

Deliverable, Developable and Not-developable sites

The determination of a site's suitability, availability and achievability combined with timeframe for development directly informs the overall site assessment as either:

- Deliverable,
- Developable, or
- Not-developable.

Annex 2: Glossary, of the NPPF 2018 explains that for a site to be considered deliverable, it "should be available now, offer a suitable location for development now, and be achievable with a realistic prospect that development will be delivered on site within five years. Sites that are not major development, and sites with detailed planning permission, should be considered deliverable until permission expires, unless there is clear evidence that homes will not be delivered within five years (e.g. they are no longer viable, there is no longer a demand for the type of units or sites have long term phasing plans). Sites with outline planning permission, permission in principle, allocated in the development plan or identified on a brownfield register should only be considered deliverable where there is clear evidence that housing completions will begin on site within five years".

It continues by explaining that for a site to be considered developable, it "should be in a suitable location for housing development with a reasonable prospect that they will be available and could be viably developed at the point envisaged."

In order to ensure that we abide by the above guidance, we have classified suitable, available and achievable sites as either being deliverable or developable. This is explained in the sub-headings within this section.

New HELAA sites

New sites can be submitted to the HELAA at any point through the site submission form which is available on the HELAA webpage. The administrative cut-off date for this year's HELAA, however was the middle of August. The majority of new sites have been received as formal site submissions through the call for sites exercise. There were also a number of sites sourced from sites coming through the planning process.

With all new sites, relevant supplementary information provided by individuals and organisations on specific sites or wider known constraints which would impact upon the assessment of sites, were fed into the update.

29 new sites were assessed or included as part of the 2018 update, of which 16 were concluded to be deliverable (suitable, available and achievable), 7 sites were developable and the remaining 6 sites were found to be not deliverable or developable due to suitability, availability or achievability reasons.

Amendments to existing assessed housing sites

The Assessment is a 'living' document which allows for the conclusions on existing sites to be reconsidered in light of new or updated information submitted to, or acquired by, the Council from site proponents or relevant stakeholders. This information may be a factual update on the recent progress of a site with extant planning permission or reflecting additional work undertaken by proponents of a site to resolve previously identified constraints.

The dwelling capacities/ site changes with extant planning permission have been amended to reflect any commencements or completions in the last year.

Deliverable Sites

For the purposes of this report, we have classified sites that have been assessed to be suitable, available and achievable to be deliverable. Deliverable sites have three sub-categories: Deliverable (general), Deliverable (Neighbourhood Plan) and Deliverable (Strategic).

In summary, 53 sites were considered to be deliverable (general), providing a potential capacity of 2,690 dwellings. All sites considered to be deliverable are contained within Appendix 1, in the form of a proforma.

Developable Sites

For the purposes of this report, we have classified sites as being developable if they are either suitable, available and achievable sites, but specific information suggests that development could not come forward within 5 years;

In summary, 47 sites were considered to be developable, bringing a potential capacity to deliver 5,563 dwellings. All sites considered to be developable are contained within Appendix 2, in the form of a proforma.

Not-Developable

A site is not-developable where the prospect of development is unlikely as it does not meet all three criteria of being suitable, available and achievable. As such, there are multiple reasons as to why a site would be considered non-developable.

All 180 sites considered to be not developable are contained within Appendix 3, in the form of a proforma.

Employment Sites

At the time the HELAA 2018 was published the Employment sites had not been reconciled against the WSCC CILLA data 2018.

Employment Sites have now been updated against the CILLA data 2018 therefore an amended Appendix 4.1 - Existing Employment sites and Appendix 4.2 - Potential Employment sites is now included together with a new Appendix 4.3 - Potential Employment Sites Assessment proformas (including commitments and non-commitments).

None of the Existing Employment Sites have a proforma as they remain in the HELAA for information purposes only.

A site is considered a Potential Employment Site in the HELAA where the proposed use is for Business and Industrial (Use Classes B1, B2 & B8) and will yield at least 500sqm of new floorspace.

Employment Sites are classified in the HELAA as follows:

Potential Employment Site: to be considered 'a potential employment site it should be available now, offer a suitable location for development, and be achievable with a realistic prospect that a business use will be delivered on the site within five years. Sites that have planning permission for an employment use are considered potential employment sites until permission expires or the site is built out with an employment use. Sites that have been identified as a potential employment site but do not currently have permission are included if they have been recently promoted. Potential Employment sites are coloured YELLOW on the HELAA map. Sites with a commitment do not have a coloured polygon.

Existing Employment Sites: These are sites that were included from the original Economic Land Availability Assessment (ELAA) in 2010, for information purposes only they remain in the HELAA. Once a potential employment site is built out it becomes an Existing Employment Site. Existing Employment sites are coloured BROWN on the HELAA map.

There were no new Potential Employment sites submitted under the call for sites consultation in 2018 but there were 8 new commitment sites from the CILLA data provided by West Sussex County Council. For further details on Floor space available and completed see Chapter 6 of the Authority Monitoring Report.

Final HELAA figures

LPA Area Assessment

The table below (table 2) summarises the above information by both the number of sites assessed and potential dwelling yield for the LPA area. The figures reflect any changes in capacity made in the assessment of the site.

Total sites assessed		Deliverable sites**		Developable sites**		Not developable	
No. of sites	Dwelling Yield	No. of sites	Dwelling Yield	No. of sites	Dwelling Yield	No. of sites	Dwelling Yield
280	8,253	53	2,690	47	5,563	180	N/A*

Table 2: Final HELAA figures.

*Please note that sites classed as not-developable are not allocated a capacity

** Please also note that these figures relate to sites that have not been identified either as strategic allocations within the ALP 2018 or as a site within a Made Neighbourhood Plan.

Strategic sites are additional to these figures.

Permitted/Commitment sites

For this update an additional summary table has been produced which extracts those sites with extant planning permission/commitments (see Appendix 5). Whilst permitted sites are a key source of sites for the purposes of the HELAA, they should not be counted towards the final HELAA totals. A total of 82 sites have been identified as commitment sites.

Windfall Assessment

Background

The NPPF 2018 identifies windfall sites as 'sites not specifically identified in the development plan.'

Paragraph 70 of the NPPF 2018 states that 'where an allowance is to be made for windfall sites as part of the anticipated supply there should be compelling evidence that they will provide a reliable source of supply. Any allowance should be realistic having regard to the strategic housing land availability assessment, historic windfall delivery rates and expected future trends.

Historically, a significant contribution to the housing supply has come from residential garden land; however the Government has said that 'Plans should consider the case for setting out policies to resist inappropriate development of residential gardens, for example where development would cause harm to the local area.' (NPPF 2018 para 70). On this basis the supply from such developments is likely to diminish although in some cases such developments may be appropriate if there is no harm to the local area.

Approach

The housing supply for the Arun Local Plan period includes a windfall allowance, reflecting the contribution to be made by 'windfall' sites to the housing supply. This is based on monitoring data. The Council's view is therefore, that the delivery of unidentified small sites in the district has been, and will continue to be, an integral source of housing supply, and therefore the HELAA will assist in providing information in order for a calculation of potential future housing delivery through windfall sites to be made and set out in the Authorities Monitoring Report.

It should be noted that Arun District together with other Districts within West Sussex together with the County Council, apply a windfall definition with a size threshold of 6 or fewer dwelling units for monitoring purposes. Some allowances will need to be made in the monitoring framework for delivery of some sites which fall within the windfall size

threshold via the Non-Strategic Sites Development Plan Document and Neighbourhood Plans being prepared because such sites may be more sustainable and appropriate as deliverable allocations in Parish communities (the NPPF 2018 also emphasises the need to deliver smaller sites as a proportion of housing needs i.e. at least 10%).

Final Assessment/Conclusions

Summary

This section of the report summarises the main findings of the HELAA and indicates how the findings will be used as part of the preparation of Development Plan Documents such as the NSS DPD and Gypsy & Traveller DPD as well as NPs.

Planning Practice Guidance

The Planning Practice Guidance identifies a number of core outputs from the HELAA. These are highlighted with PPG reference points within the HELAA.

PPG: A list of all sites or broad locations considered should be prepared, cross-referenced with a National Land and Property Gazetteer (NLPG) number to locations on maps.

HELAA Output: All of the sites contained within the Council's HELAA have been identified and provided with their PPG number. This has helped the authority to link the site to the planning applications database which enables a clearer picture of a sites individual planning history to be identified and understood. This is particularly helpful when undertaking future reviews of the HELAA. This is visible within the HELAA database of sites.

PPG: An assessment of each site or broad location, in terms of its suitability for development, availability and achievability including whether the site/broad location is viable) to determine whether a site is realistically expected to be developed and when.

HELAA Output: This information is contained within the Council's HELAA database. This has been based on information available to the Council including individual submissions received from site owners or promoters. The results of which have also been incorporated into individual site pro-forma. The site pro-forma's are contained within the appendices to this report along with an interactive map which is contained on the Arun District Council website (www.arun.gov.uk).

PPG: Contain more detail for sites which are considered to be realistic candidates for development, where others have been discounted for clearly evidenced and justified reasons; the potential type and quantity of development that could be delivered on each site/broad location, including a reasonable estimate of build out rates, setting out how any barriers to delivery could be overcome and when.

HELAA Output: This information is contained with the Council's HELAA database. The results of which have also been incorporated into individual site pro-formas. The site pro-formas are contained within the appendices to this report along with an interactive map which is contained on the Arun District Council website (www.arun.gov.uk).

Overall Supply of Deliverable and Developable Sites

50 sites were considered to be deliverable, with capacity for 2,043 dwellings on those sites. A total of 49 sites were found to be developable, capable of bring forward 5,853 dwellings.

Housing Trajectory

Using the information collected on sites assessed as being deliverable and developable, we will be able to produce a housing trajectory for the period 2011-2031. This trajectory will be included within the Housing Land Supply alongside the AMR, and published separately.

How the Findings will be used

The findings of the HELAA will be used alongside other evidence base documents, to inform the production of any Development Plan Documents by helping to identify development options for consideration and assessment.

It is important to remember that the classifying of a site as suitable in the HELAA does not grant a site planning permission and is not an allocation. Only a Development Plan Document or Neighbourhood Plan can allocate land for development.

Future Updates

The HELAA is a process that is to be repeated on an annual basis. As such, this HELAA report will be revised to take into account additional information submitted to the Council. It will reassess sites based on this additional information and will assess any further sites submitted at the same time.

The estimated windfall delivery rate will be recalculated to take into account recent completions and a reassessment of market conditions and published within the AMR.

APPENDICES

The appendices contain detailed site assessments in the form of individual proforma according to the status of the site. Please note that the appendices are ordered by parish.

The appendices are ordered as follows:

Appendix 1 Deliverable Sites

- Appendix 1.1 Deliverable Sites - Summary Tables
- Appendix 1.2 Deliverable Sites (excluding Neighbourhood Plan Sites) - Detailed Proforma
- Appendix 1.3 Deliverable Sites (Neighbourhood Plan Sites) - Detailed Proforma
- Appendix 1.4 Deliverable Strategic Allocation Sites – Detailed Proforma

Appendix 2 Developable Sites

- Appendix 2.1 Developable Sites - Summary Tables
- Appendix 2.2 Developable Sites (excluding Neighbourhood Plan Sites) - Detailed Proforma
- Appendix 2.3 Developable Sites (Neighbourhood Plan Sites) - Detailed Proforma

Appendix 3 Not-Developable Sites

- Appendix 3.1 Not-Developable Sites - Summary Tables
- Appendix 3.2 Not-Developable Sites - Detailed Proforma

Appendix 4 Employment Sites

- Appendix 4.1 Employment Sites - Existing Employment Sites
- Appendix 4.2 Employment Sites - Potential Employment Sites
- Appendix 4.3 Employment Sites - Potential Employment Sites - Detailed Proforma

Appendix 5 Commitments

- Appendix 5.1 Commitments – Summary Table

Appendix 6 Potential C2 Use

Proforma

The Proforma contains the following information:

- HELAA Site Reference
- National Land and Property Gazetteer number
- Site address
- Site area
- An assessment of each site in terms of its suitability for development, availability and achievability
- A decision as to whether the site has been assessed as deliverable, developable or not developable

Sites considered to be either deliverable or developable also contain the following information:

- The potential type and quantity of development that could be delivered
- A reasonable estimate of build out rates;
- An indication of the timescale for delivery

Interactive HELAA Map

Alternatively, the proforma can be obtained via the interactive map found on the Arun District Council website (www.arun.gov.uk). The map provides an easy to use system for identifying a specific site within the assessment area. This is particularly helpful if you wish to identify a specific site or sites within a parish or settlement.

APPENDIX 1 – DELIVERABLE SITES

APPENDIX 1.1 – DELIVERABLE SITES

SUMMARY TABLES

DELIVERABLE SITES (EXCLUDING NEIGHBOURHOOD PLAN, LOCAL PLAN ALLOCATIONS & COMMITMENTS)

HELAA Ref	Address	Parish	Viability Yield
WE8	Land north of Lees Yard, Lidsey Road	Aldingbourne	37
113B	Land West of Westergate Street (and Meadow Way)	Aldingbourne	73
18AL3	Land west of Hook Lane Aldingbourne	Aldingbourne	12
32	Wings Nursery Lidsey Road	Aldingbourne	60
82B	St Denys North Dappers Lane	Angmering	22
17A1	Land East of Old Worthing Road and South of Littlehampton Road	Angmering	65
82A	St Denys Nurseries (south), Dappers Lane	Angmering	18
111A	Phase 1 Land between East Drive and A259 Angmering and Rustington	Angmering	115
82C	Broadlees, Dappers Lane	Angmering	51
66	Land South of Stewards Rise	Arundel	216
103	Land to the North of Lake Lane, West Hightrees	Barnham	68
44	Fir Croft, Church Lane	Barnham	12
17BE1	Land North West of Oldlands Farm East of Shripney Road/North of A259	Bersted	96
BR23911	The Beach The Esplanade	Bognor Regis	49
BR19811	Westside Supplies, 17-18 Durban Road	Bognor Regis	14
NEWBR1	Land adjoining Gordon Avenue West	Bognor Regis	11
BR1913	Ockley House 6 Ockley Road	Bognor Regis	8
18BR2	Richmond Arms 224 London Road	Bognor Regis	10
NEWEG2	1 Northfields Cottages, Fontwell Avenue	Eastergate	49
18EG1	Land North of Spode Cottage Eastergate Lane	Eastergate	28
18FP1	Land at Stanhorn Grove	Felpham	13

HELAA Ref	Address	Parish	Viability Yield
	Felpham		
FG17	Grange House and Mullbery, Church Lane	Ferring	10
18FG1	144 - 148 Littlehampton Road Ferring	Ferring	18
110	Land east of Green Park	Ferring	56
18F1	Waterbury House Ford Lane	Ford	9
17K1	Land East of Kingston Lane East Preston	Kingston	48
18K1	Land East of Kingston Lane (south) East Preston	Kingston	24
LU12A	Land North of Littlehampton Acadamy Daisyfields Caravan Site	Littlehampton	62
LU33A	Meadowfield House	Littlehampton	12
14	Land South of Old Mead Road, Old Mead Road	Littlehampton	72
136	Torri, Old Mead, Sandfield Nurseries, Old Mead Rd	Littlehampton	122
LU18A	Toddington Farm (Land North & West of 1-3 Toddington Farm Cottages)	Littlehampton	13
LU12B	Land North of Littlehampton Acadamy West of Oakcroft Gardens	Littlehampton	52
17LU1	Norway Lane Nursery	Littlehampton	15
18LU9	Land at Meadview Nursery Lyminster	Littlehampton	12
17M1	The Cabin Elmer Road	Middleton	5
M4	Car park (The Cabin), Elmer Road	Middleton	6
FP17	Land to south of A259	Middleton	139
18P1	Land at Sefter Road Bognor Regis	Pagham	9
69	Land West of 239-249 Pagham Road North of Summer Lane	Pagham	18
78	Clock House and Surrounding Area	Rustington	13
FON3	Land to West of A27	Walberton	55
18WA5	Former Lanes End House West Walberton Lane	Walberton	12
94	Land at Sunny Corner, West Walberton Lane	Walberton	29
